DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02. The oath or declaration is defective because the instant application claims the priority of parent application 09/641,034 under 35 U. S. C. 119(e), which is not correct, it should claim the priority under 35 U. S. C. 120 and/or 121.

Election/Restrictions

2. Applicant's election with traverse of Group I, claims 1-11, and integrin binding motif in Paper No. 10 is acknowledged. The traversal is on the ground(s) that the search of all claims including all three motifs can be made without serious burden. This is not found persuasive because the traversal is not on the grounds that the inventions are not independent and distinct, rather, the traversal is on the grounds that there is no serious search burden. As such restriction is proper if two or more claimed inventions are either independent or distinct. See MPEP 803. Furthermore, coexamination of each of the additional groups would require search of subject matter or sequences unnecessary for the examination of the elected claims. For example, if claim 2 were included, it would require additional search of SEQ ID NO:41 and glycosaminoglycan binding motif; if claims 4 and 5 were included, it would require additional search of SEQ ID NOs:42 and 43, and calcium binding motif; if claim 13 were included, it would require additional search on renal phosphate excretion. Therefore, coexamination of each of these inventions would require a serious additional burden of search.

Page 3

Art Unit: 1653

The restriction groups have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the invention is not coextensive particularly with regard to the literature search. A reference which would anticipate the invention of one group would not necessarily anticipate or make obvious any of the other group. Moreover, as to the question of burden of search, classification of subject matter is merely one indication of the burdensome nature of the search involved. The literature search, particularly relevant in this art, is not co-extensive and is much more important in evaluating the burden of search. Burden in examining materially different groups having materially different issues also exist. The requirement is still deemed proper and is therefore made FINAL.

Claims 3-5 are directed to the sequences of glycosaminoglycan binding motif and calcium binding motif, thus, they are non-elected and withdrawn from consideration. Therefore, claims 1-2, and 6-11 are examined.

Claim Objections

3. Claims 3-5 are objected to because the claim contains non-elected invention.

Claim Rejections-Obviousness Type Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 09/812,485

Art Unit: 1653

4. Claims 1-2 and 6-11 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 and 12-16 of copending application 09/641034. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-2 and 6-11 in the instant application disclose a peptide compound enhances bone growth and comprises about 10 to about 50 amino acids in the sequence, wherein each amino acid is D- or L-conformation, the sequence comprises an integrin binding motif, glycosaminoglycan binding motif or calcium binding motif; and a formulation comprising the peptide compound and a carrier. This is obvious in view of claims 1-9 and 12-16 of copending application which disclose a peptide compound has the biological activity of enhancing bone growth, and comprises about 10 to about 50 amino acids in the sequence, wherein each amino acid is D- or L-conformation, the sequence comprises an integrin binding motif, and a formulation comprising the peptide compound and a carrier. Since the claims of the instant application and those of the copending application are directed to a peptide compound having the biological activity of enhancing bone growth and comprising about 10 to about 50 amino acids in the sequence, wherein each amino acid is D- or L-conformation, and the sequence comprises an integrin binding motif. Thus, claims 1-2 and 6-11 in present application, and claims 1-9 and 12-16 of copending application are obvious variations of a peptide compound enhancing bone growth and comprising about 10 to about 50 amino acids in the sequence. wherein each amino acid is D- or L-conformation, and the sequence comprises an integrin binding motif.

Page 4

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Application/Control Number: 09/812,485 Page 5

Art Unit: 1653

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 2, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheng et al. (U. S. Patent 5,849,865, December 15, 1998).

Cheng *et al.* teach (Arg-Gly-Asp)-containing peptides such as SEQ ID NOs:79 and 80 which have 11 amino acids and bind to α5β1 receptor (Fig 2A) can be used for treating osteoporosis and enhancing bone formation (column 15, lines 23-27; claims 1 and 2). The reference also teaches the preparation of a pharmaceutical composition comprising a therapeutically effective amount of the polypeptide and a carrier such as saline, and administration of the composition to a subject either as a bolus or infusion over a period of time (column 14, lines 25-35; column 15, line 62-column 16, line 23; claims 7 and 8).

6. Claims 1, 2, 7 and 8 are rejected under 35 U.S.C. 102(a) as being anticipated by Rowe (WO 99/60017 November 25, 1999).

Rowe teaches a phosphatonin polypeptide (SEQ ID NO:2, 430 amino acids, all L-configuration), which comprises 10-50 amino acids and a RGD domain, is involved in the regulation of phosphate metabolism and bone mineralization (page 1, paragraph 1; page 43, lines 1-3), and the polypeptide can be used to improve the impaired bone formation (page 49,

Application/Control Number: 09/812,485

Art Unit: 1653

paragraph 2; claims 1 and 2). The reference also teaches the preparation of a pharmaceutical composition comprising a therapeutically effective amount of the phosphatonin polypeptide and a carrier such as saline, and administration of the composition to patients by parenteral injection (page 60, paragraph 3; Example 7; claims 7 and 8).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 1, 2 and 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reynolds (U. S. Patent 5,015,628) taken with Rowe (WO 99/60017 November 25, 1999).

Reynolds teaches phosphopeptides having 5-30 amino acids can be used for treating dental diseases, bone diseases such as osteoporosis and osteomalacia, and diseases related to malabsorption of mineral (column 1, lines 28-33), and the phosphopeptides in an effective amount can be formulated in a composition (column 8, lines 35-39) as toothpaste (Example 11;

Application/Control Number: 09/812,485 Page 7

Art Unit: 1653

claim 9), mouthwash (Example 17; claim 10), and topical gel (Example 23; claim 11). However, Reynolds does not disclose the composition comprises a peptide compound having integrin binding motif (RGD). Rowe teaches a phosphatonin polypeptide (SEQ ID NO:2, 430 amino acids, all L-configuration), which comprises 10-50 amino acids and a RGD domain, is involved in the regulation of phosphate metabolism and bone mineralization (page 1, paragraph 1; page 43, lines 1-3), and the polypeptide can be used to improve the impaired bone formation (page 49, paragraph 2; claims 1 and 2). Rowe also teaches the preparation of a pharmaceutical composition comprising a therapeutically effective amount of the phosphatonin polypeptide and a carrier such as saline, and administration of the composition to patients by parenteral injection (page 60, paragraph 3; Example 7; claims 7 and 8). At the time of invention was made, it would have been obvious to one of ordinary skill in the art to use the phosphatonin polypeptide having bone growth enhancing property as taught by Rowe for preparing the composition of toothpaste, mouthwash or oral patch as taught by Reynolds because the use of phosphatonin polypeptide in the composition can promote the bone growth in the application. Thus, the combined references result in the claimed invention and was, as a whole, prima facie obvious at the time the claimed invention was made.

Conclusion

8. No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chih-Min Kam whose telephone number is (703) 308-9437. The examiner can normally be reached on 8.00-4:30, Mon-Fri.

Application/Control Number: 09/812,485

Art Unit: 1653

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Low can be reached on (703) 308-2923. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-0294 for regular communications and (703) 308-4227 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
